

To assemble the GPS holder you'll need these components:

1. unscrew the two lateral screws on the accessories station:

2. Make sure you did not take out the two rubber semi-circles on the inner part of the accessories station as those prevent sliding and keep the holder secure

3. Place the station on the caddy frame and screw it back on

4. Attach the gps holder arm, making sure it's in the correct direction (see video 1 attached to the email)
5. Attach the gps holder to the arm and regulate size (see video 2 and video 3 attached to the email).

Again, please do not discard the rubber semi-circles and make sure they are placed correctly on the accessories station to secure the holder to the caddy (video 4).
